

Mobile Anchorage System

SHE LifeLine System Mobile Anchorage System

Tested and certificated

- to EN 795:2012 class C
- Max Systemlänge 50 m
- Max Feldlänge 8.5 m
- Min field length 3 m
- Admitted for max. 4 people

The **SHE LifeLine System** is used as a mobile stop device, e.g., at works on the foundation. The system passes of the roping and rescue heave device SHE Rescue Lift, to a 10.5 mm of core coat rope SHE and a preliminary tension indicator. The equipment may be used only with a rallying belt to EN 361 and connecting means with case damper to EN354 / 355. Maximum 4 people can be protected at the same time in the stop device.

The max. allowed length of the "SHE LifeLine System" amounts to 50 m. The free span of a field may amount to max. 8.5 m and minimally 3.0 m. With a span greater than 8.5 m an interconnection must be installed for the rope, e.g., the mobile "SHE prop". The preliminary tension of 1KN of the core coat rope SHE occurs about the preliminary tension indicator.

With the use in the foundation 7 props can be put up. The props are screwed all around the foundation. Every prop disposes of a poster point in which in each case the idler pulley premounted in the rope with carbine are fastened. The complete system is closed in the circle.

The protection of the people occurs in the rope of the "SHE Rescue Lift" by means of connecting means with case damper. Should a person occur in the system there can fall indulgences of the had an accident person immediately with the installed "SHE Rescue Lift".

The "SHE props" are to be dismantled any time and to use again in another location.
