

Production of rescue draughts

By the specific features with jobs in risk surroundings as for example wind energy arrangements play thought-out and rescue procedures functioning in practice (draughts) a central role for the security of your employees and the enterprise.

We provide rescue draughts among other things for industrial arrangements, On-and Offshore wind energy arrangements, On-and Offshore wind parks, shaft arrangements, rescue of cranes, power stations, power station construction, automatic warehouse, rescue from cramped rooms, e.g., silo arrangements. If requested we train your employees in the rescue draught together provided with you, select the suitable rescue material and carry out the annual examinations (DGUV 312-906).

We discuss you and clear your individual questions all around the security.

Production of fire prevention documents

A fire prevention order regulates the behaviour of people in buildings or companies and is comparable with a „gen. commercial condition“. A fireprotective order on the basis of fire prevention documents is necessary always then when it concerns building (arrangements) with a special use. Besides, the fire prevention order and the necessary fire precautions are provided for every object specifically on the basis of the fire prevention documents.

Beside the aspect of the security fire prevention documents also play an important role for the area of the assurance: Insurers value, e.g., in

If the fire prevention documents frame of your risk management with a property insurance. We provide with pleasure the fire prevention documents necessary for you (German Institute for Standardization 14096) which form with it the base for the fire prevention order.

Security and health protection coordination (SiGeKo)

Already with the planning and with the realisation of your projects we recommend the attention of all questions all around security and health protection in law-compliant way. Our safety experts / security co-ordinators accompany your projects from beginning up to the end by your order as a security co-ordinator and health co-ordinator (SiGeKo).

By the application of our experts as SiGeKo if we give you the certainty that with your plans from beginning to everything corresponds to the general principles §4 of the industrial safety act. With us you are in this aspect on the sure side.

Security-technical care

especially for small and middle-size enterprises

On account of the industrial safety legislation every enterprise must keep to certain precautions for the security and the protection of his employees. This is also valid for small and middle-size enterprises which occupy as a rule no expert or a company doctor as a full-time strength. Based on accident prevention regulation regulation DGUV 2

- Control care for enterprise with up to 10 employees
- Control care for enterprise with more than 10 occupying
- Demand-oriented care for enterprise with up to 50 occupying

discuss our experts with pleasure to all questions of the legal regulations for the working security and accident prevention. Together with you we compile a precise individual solution for your enterprise inklusiv of the integration of a company doctor.

Risk and danger judgement

The planning and realisation of wind energy arrangements in On-and Offshore area requires among other things a comprehensive analysis and judgement of the risks linked with it and dangers for „person and machine“.

- The risk analysis examines the dangers which goes out specifically from a certain machine from the time of the introduction about the whole Life-Cycle of the machine.
- The danger judgement examines the dangers which go out in a certain field of work from the used working means. She is up regardless of the concrete machine and is based in the core

- the operational safety order (BetrSichV)
- to the industrial safety act (ArSchG) and
- the danger material order (GefStoffV)

For your security: We provide for you with pleasure the risk and danger judgement which corresponds to the called legal regulations and the demanded norms (German Institute for Standardization EN ISO 12100).
